

Alex Jordan

CYBERSECURITY ANALYST

San Francisco, CA, USA | alex@example.com | alexjordan.dev | +1 (555) 012-3456 | linkedin.com/in/alexjordan

SUMMARY

Cybersecurity Analyst and Network Security Engineer specializing in Zero Trust architecture, DNS security, and production infrastructure hardening. Operate a 24/7 self-hosted environment running Docker services, a multi-layer DNS chain, mDNS, and dual node secure-access tunnels. Experienced in firmware security research, CI/CD automation, and open-source contribution. Combines deep infrastructure hands-on experience with AI-assisted development workflows.

PROFESSIONAL EXPERIENCE

Self-Hosted Infrastructure Administrator

May 2023 – Present

- Deployed and operate a 24/7 production server (Debian, FreeBSD) hosting Docker services including Pi-hole, Traefik, Vaultwarden, Emby, and qBittorrent inside a management subnet with 99.9% uptime
- Engineered multi-layer DNS security chain with Pi-hole and AdGuard Home on OpenWrt router as secondary resolver
- Implemented dual secure-access: Cloudflare Tunnel (multi-node backup) for full remote access to internal services behind CGNat
- Configured OpenWrt router with VLAN-segmented bridges, custom routing rules, and firewall policies for maximum security and reliability
- Automated encrypted cloud backups with rclone
- Integrated ESP8266 IoT sensor with InfluxDB and Grafana Cloud for real-time monitoring

PROJECTS

Unified Web Platform | Next.js, React, TypeScript, GitHub Actions

Aug 2025 – Present

- Built automated CI/CD pipeline merging 3 codebases via Git submodules, cutting deployment time (30 min → 5 min) with zero-downtime rollouts and automated rollback
- Automated SSL certificate provisioning for internal services and distribution to nodes with backup provider

Consumer Router Firmware Analysis Report | Reverse Engineering, Network Security

Nov 2025

- Extracted and analyzed filesystem of proprietary router OS
- Identified active MAC address telemetry to a vendor cloud endpoint
- Discovered router admin credential exposure; documented a telnet activation vector via unauthenticated CGI endpoint

DNS Adlist Repository | DNS Security, Threat Intelligence, Community

Jan 2023 – Present

- Maintain DNS blocklist ecosystem serving hundreds of users with platform-specific lists updated on a weekly basis

SKILLS

Network & Security: Zero Trust Architecture, Network Segmentation, DNS Security, Firewall Configuration, OpenWrt, Cisco, MikroTik, Penetration Testing, Vulnerability Assessment, Access Control

Infrastructure & Cloud: Docker, Linux, Proxies, Apache, Cloudflare, Site-to-Site VPNs, AWS, Azure

DevOps & Automation: CI/CD, Bash Scripting, Ansible, rclone, Git, Infrastructure as Code

Monitoring & Tools: Grafana Cloud, InfluxDB, SQLite Logging, IoT Integration

Programming: YAML, Python, TypeScript, JavaScript, Bash, PHP, C, React, Next.js, REST APIs

EDUCATION

BS Cybersecurity — State University, Anytown, USA (3.68/4.00)

Sep 2023 – Present

- Relevant coursework: Network Security, System Administration, Cloud Infrastructure, Digital Forensics, Cryptography, Ethical Hacking, Software Development

CERTIFICATIONS

- Certified in Cybersecurity (CC) — ISC²
- Google Cybersecurity Professional — Google
- CCNA (In Training) — Cisco
- Introduction to Cybersecurity — Cisco
